

## Readme: Preparation for running the project colab notebook

### Team 99: Jihan Zhang, Zesheng Liu, Ziyi You

To run the project colab notebook, you need to create a folder called 'Project' in you Google Drive just under the path '/Mydrive' , and then upload all the dataset into the Project folder. All the dataset then should get a path like `/Mydrive/Project/csv\_files`.

The right folder in Google Drive should be similar to this graph.

My Drive ▾					
Name ▾	Owner	Last modified by ...	File size		
 Project	me	Dec 11, 2021	—		

For this project, we use several dataset. The main dataset is from [Kaggle:Climate Change: Earth Surface Temperature Data](#). As it is a big dataset, we do not upload it together with the colab notebook. Before running the notebook, you could download it from the link. Our additional dataset is from World Bank, and we modify some raw columns names to make it more readable. We attached all the additional dataset with the submission. So you could directly upload it to the project folder.
